Allowable Subject Matter

1. **Claims 2-11, 13, 15, 17 and 18 are allowed.**

Claim 3

The primary reason for allowance of the Claim 3 is the inclusion of when a voltage of the input terminal is below a threshold voltage, the output terminal outputs a control signal having a first level such that the adaptor supplies the circuit system through the charge input terminal to start the circuit s system and charge the battery; when a voltage of the input terminal is above the threshold voltage, the output terminal outputs the control signal having a second level such that the battery supplies the circuit system; when the first control terminal has the first level, the first switch is turned on; when the first control terminal has the second level, the first switch is turned off, and the first signal is preset at the second level; when the second control terminal has the first level, the second switch is turned on, and when the second control terminal has the second level, the second switch is turned off; and when the third control terminal has the first level, the third switch is turned on, and when the third control terminal has the second level, the third switch is turned off.

Claims 2 and 4-6 depend from Claim 3 and therefore are allowable for at least the same reasons noted above with respect to claim 3.

Claim 7

The primary reason for allowance of the Claim 7 is the inclusion of when the voltage of the battery is below a threshold, turning on a second switch such that

the adaptor supplies the circuit system through the charge input terminal and the second switch to start the circuit system and charge the battery; when the voltage of the battery is above the threshold, turning off the second switch and turning on a third switch such that the charge input terminal is coupled to the battery through the third switch, and the circuit system is powered by the battery; and outputting a switch signal from the circuit system to control a first switch coupled between the adaptor and the charge input terminal for controlling charge capacity.

Claims 8-11 and 18 depend from Claim 7 and therefore are allowable for at least the same reasons noted above with respect to claim 7.

Claim 17

The primary reason for allowance of the Claim 17 is the inclusion of when the voltage of the battery is below a threshold voltage, a control signal having a first level is output to turn on a second switch such that the adaptor supplies the circuit system through the second switch to start the circuit system and charge the battery; when the voltage of the battery is above a threshold voltage, a the control signal having a second level is output to turn off the second switch and turn on a third switch such that the circuit system is coupled to the battery through the third switch and the battery supplies the circuit system.

Claims 13 and 15 depend from Claim 17 and therefore are allowable for at least the same reasons noted above with respect to claim 17.
